---

All – FYI

The Air Division / Air Toxics, Radiation and Indoor Air office is reviewing a NESHAP application to construct/modify the Canyon uranium mine located south of the Grand Canyon. The application was received July 6<sup>th</sup> and under the NESHAP it should be approved or denied by September 6<sup>th</sup>. See the Background information attached. ATRIA and the Tribal office invited the Kaibab, Hualapai and Havasupai to consult on the location of the nearest members of the public. To date we have received no comments from the tribes. Subpart B of the NESHAP limits the dose to the maximally exposed individual to under 10 millirem/year. With the nearest individual being about 4.5 miles away, the modeled doses are well below the standard. (b) (5)
